PermissionGuard — Access Governance & Creep Audit Report

Generated on October 19, 2026 at 15:50:14 UTC | Classification: INTERNAL SECURITY AUDIT

1. Executive Summary

This report provides an automated point-in-time analysis of the organizational permission lifecycle, identifying potential permission creep, dormant credentials, role mismatches, and access accumulation. The PermissionGuard rules-based detection engine continuously assesses active authorizations against the principle of least privilege to prevent excessive exposure of sensitive company assets.

Total Monitored Users: 18	**Protected Resources:** 22	**Active Permissions:** 58
Inactive (Dormant): 1	**Expired Grants:** 5	**High/Critical Findings:** 25

2. Prioritized Security Findings (High / Critical)

Code	Identity & Role	Resource & Detail	Risk Level	Score
FND-0001	Arun Kumar Developer	**Financial_Report_Q3.xlsx** Arun Kumar (Developer) holds READ permission on CONFIDENTIAL resource ...	**CRITICAL**	**75**

3. Inactive Permissions (Requires Revalidation / Revocation)

User	Resource	Permission	Last Used	Granted Reason
Arun Kumar	Financial_Report_Q3.xlsx	**READ**	2026-08-10	Required for cross-team ERP billing integrati...

4. Recommended Governance Actions

1. **Revoke Intern High-Impact Privileges:** Immediately revoke EDIT privileges granted to non-permanent accounts on RESTRICTED human resources and payroll files.

2. **Process Dormant Revalidations:** Conduct department review on permissions with 60+ days of recorded inactivity. Revoke access where projects have completed.

3. **Enforce Baseline Scope:** Restrict engineering roles from holding persistent access to finance documents unless an active, time-bound project ticket is verified.

4. **Mitigate Repeated Extensions:** Establish managerial escalation policy for any permission extended 3 or more times.
